

Storage and Disposal

Store product at or below room temperature and out of reach of children. For longer-term storage of more than one month, refrigeration or freezing is recommended. Dispose of product and packaging by wrapping in newspaper and throwing in the trash.

Precautions

Although the product contains no pesticides and is not known to be toxic, place out of the reach of children. It is recommended to wear gloves when handling to avoid getting product odor on skin. If product contacts skin, wash with soap and water.

Red and Confused Flour Beetles
Warehouse and Khapra Beetles
Indian Meal Moths
Almond and Mediterranean Flour Moths

Excessive Heat May Damage Product

Rockwell Labs Ltd
creating the future of pest control

Contents:
6 Tubes of Oil

Use Directions - InVite Multi-Lure Oil

For Beetles and Moths - Use with the D-Sect Station

1. Open the D-Sect Station (see directions in the **D-Sect** Station carton). Remove the release paper from a **D-Sect Custom Glueboard** and place it in the Station.
2. Place a Cotton Ball (included with the **InVite Multi-Lure Oil**) on the center of the Glueboard. Tear the tab off the top of a Tube of **InVite Multi-Lure Oil** and carefully squeeze all of the Oil onto the center of the Cotton Ball.
3. Place the **D-Sect** in any orientation (it's not necessary to keep it horizontal) and secure the **D-Sect** if needed using Hercules Putty, Liquid Nails, double-sided tape, screws, nails, Velcro, Dual-Lock, wire or construction adhesive. The Station can also be suspended *under* shelving by using Hercules Putty, Dual-Lock or Velcro placed on top of the Station. The cover of the Station can be removed for servicing even when the base is secured down. Place Stations in areas where grain products are stored, particularly in areas that provide both food and harborage for pests. The **InVite Multi-Lure Oil** will remain active for 60-90 days (longer in cool areas). Place traps about every 30 feet, or closer in areas with lots of readily available food.

For Moths and Cigarette Beetles - Use with the Hanging PFT Station

Refer to the Hanging PFT Instructions. Fill the Cup about 1/2 full with water and add 1/2 tube of **InVite Multi-Lure Oil** on top of the water. Hang traps near walls and in a grid pattern with a spacing of 50'-100' in warehouses.
